Subject: San Jacinto River Waste Pits

Good afternoon Sam

I was contacted by our Coop Agreement partners with the Texas Department of State Health Services. They were experiencing some confusion over your perspective of their work with EPA at the San Jacinto River Waste Pits Superfund site. As you may now be aware from your discussion, the State has been actively involved over a number

9768990

of years with attending EPA meetings and conducting outreach activities, distributing educational materials and gathering and addressing community health concerns. In addition to their on the ground work, at the public meeting 1/24/2013, **Richard A. Beauchamp, M.D., Senior Medical Toxicologist, Texas Department of State Health Services** made a very thorough presentation on an analysis of the San Jacinto River Waste Pits Exposure Pathways. They have also completed and released to the community the results of two birth defects investigation and a cancer cluster investigation (I have attached their Health Consultation Community Health Concerns along the San Jacinto River, Houston Ship Channel, and Upper Galveston Bay Harris County, Texas, March 2015).

They continue their interest in working with EPA to best respond to the community and feel that this involvement and contribution needs to be better coordinated. They would like to meet with you and the site team to discuss approaches which might be more effective in meeting community needs. They have offered to travel to Dallas for such a meeting. I would be happy to work with you in setting up such a meeting. Let me know how you would like to proceed.

George
